**LAMOR**

# Lamor in brief

Lamor is one of the world's leading providers of environmental solutions. For four decades, we have worked to clean up and prevent environmental incidents on land and at sea.

## We have customers in both public and private sector:

- Energy
- Infrastructure
- Other industries

## From environmental protection to remediation and material recycling

Our innovative technologies, services and tailored solutions, ranging from oil spill response, waste and water treatment to soil remediation and plastic recycling, benefit customers and environments all over the world.

We are capable of vast and fast operations thanks to our connected ecosystem of local partners, steered by our experts. We have over 600 employees in more than 20 countries. Lamor's share is listed on the Nasdaq Helsinki, Finland.

## Optimal solutions and technologies for some of the planet's harshest conditions

Lamor services for environmental protection, remediation, and material recycling, provide comprehensive solutions and expert support:

### **Environmental protection: Incident preparedness, cleanup**

Prevention • Training • Consulting • Cleanup Technologies • Projects  
Comprehensive solutions and 24/7 emergency hotline response

### **Remediation and restoration**

Soil remediation • Soil washing • Comprehensive solutions • Project management  
Consulting

### **Material recycling: Waste, water, soil, plastics**

Waste management • Wastewater treatment • Potable water production • Chemical recycling of plastic • Comprehensive solutions • Project management • Consulting

# Lamor Netherlands

Lamor has established a rental & response centre in Werkendam, the Netherlands. An extensive warehouse for oil spill response technology, covering the total area of nearly 3,000 square metres. The location will also include a Lamor customer service and sales office serving our Benelux customers and providing a global response capability.

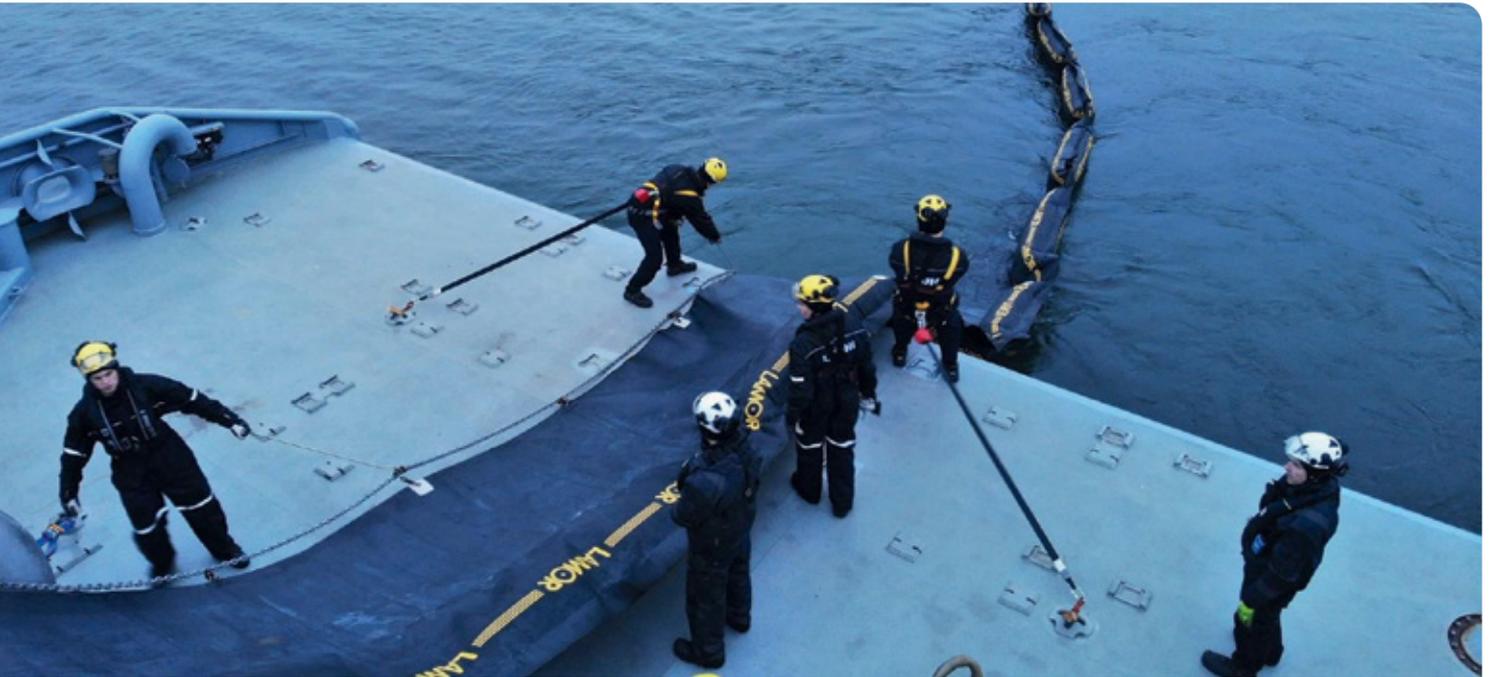

The rental and response centre will offer oil spill technology for rental, lease, and sale, as well as service and maintenance of equipment, and training services at its dedicated training facilities. Its customers will mainly consist of salvage companies, shipyards, offshore companies, governments, and port authorities.

Many global oil companies have refineries and other operations in Rotterdam, and Lamor's close proximity brings added safety to the area.

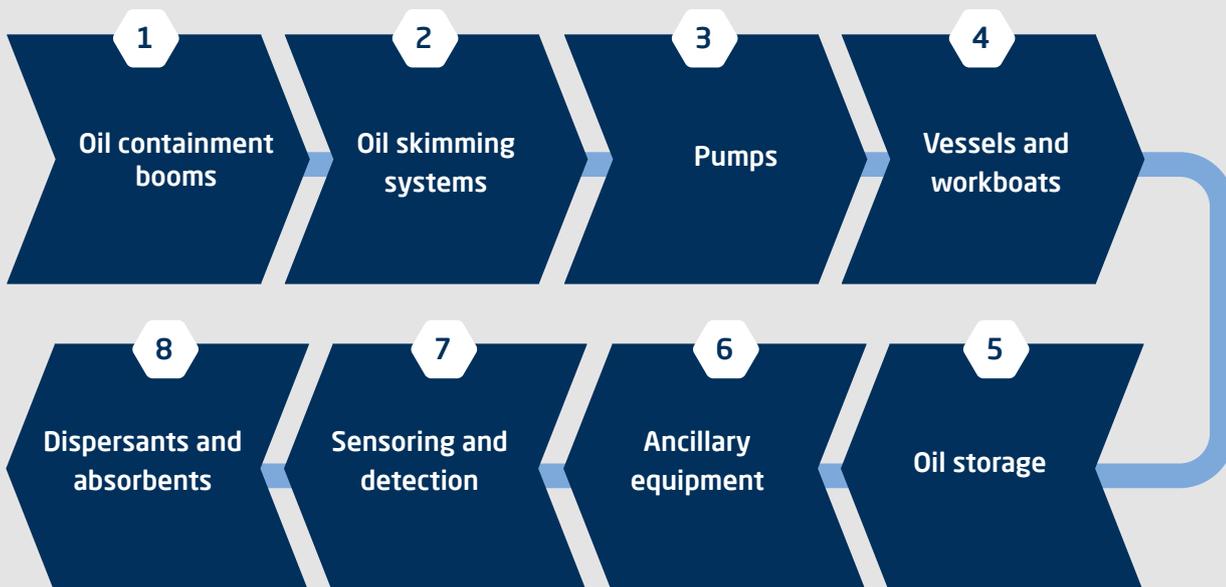

# Environmental protection

For over four decades, Lamor has been dedicated to developing oil spill response products and practices to protect the environment. We offer a full range of oil spill response technology for sale and rental, with globally distributed equipment inventories and networks that enable professional emergency response in any location. Lamor offers the widest range of environmental cleaning equipment on the market. We help customers with everything from set-up to maintenance and repairs.

## Example of OSR equipment

### 1. Oil containment booms

Oil containment booms are floating barriers used to contain and control oil spills in oceans, rivers, and lakes. They are designed to prevent oil from spreading and to guide the oil towards collection points for cleanup. Oil containment booms are important equipment in responding to oil spills and can help to minimise the environmental impacts.

### 2. Oil skimming systems

Oil skimming systems are designed to recover oil and other floating liquids from water. They typically consist of a mechanism that floats on the surface of the liquid and collects the oil, which is then removed from the system.

### 3. Pumps

Lamor pumps are multipurpose, high-performance and proven to recover all kinds of liquids up to very high viscosity fluids like bitumen. At Lamor, we have the expertise to choose the right technology and tailor a solution that meets the unique needs of your operation.

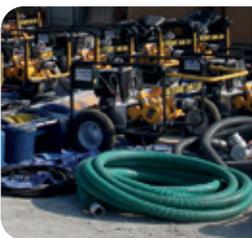

### 4. Vessels and workboats

Lamor's portfolio of vessels range from boom towing boats to ice-class oil recovery vessels. One of the latest additions are the very popular multi-purpose shallow draft vessels designed for safe oil spill recovery operations in coastal waters as well as open sea under adverse weather conditions. Dedicated oil recovery vessels designed and manufactured by Lamor are in operation worldwide, e.g., in the Arctic Pechora Sea or the Caribbean.

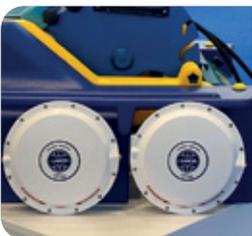

### 5. Oil storage

In all oil spill response operations, temporary storage of the recovered oil plays an important role in the efficient clean-up operations before being transported further for processing for reuse or disposal. For this purpose, Lamor can offer a variety of solutions for use on-land or deployment at sea.

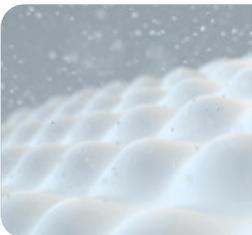

### 6. Ancillary equipment

Ancillary equipment such as powerpacks, boom recovery and washing units, air blowers, hoses, discs, etc. play an essential role in effectively utilizing your oil spill response equipment. With 40+ years of expertise Lamor has built an extensive array of ancillary equipment to aid in all oil spill scenarios

### 7. Sensing and detection

Sensing and detection technologies play a critical role in risk management. By using proven technologies such as buoy tracking, oil detection radars, and satellite tracking, we can ensure that potential risks are detected early, and appropriate measures are taken to prevent them.

### 8. Dispersants and absorbents

Dispersants and absorbents are important ancillary products in spill management and cleanup. They are effective tools for controlling spills and mitigating their impact on the environment and wildlife. When used in combination with other techniques and approaches, they provide a comprehensive solution for managing spills and protecting the environment.

# Rental services

Whether you require short-term oil spill response equipment hire, long-term leasing, outsourcing, turnkey solutions or operational management support, we have a huge pool of industry experts and resources to meet your individual needs.

## Packages

To respond in the most efficient way, we have pre-packaged our equipment into packages that are suitable for most spills and operational environments, and also include commissioning, training and maintenance.

Lamor's packages have been specially designed and developed over the years, to make our equipment as efficient and practical as possible. They have been tried and tested in various locations all around the world, in the harshest and most challenging environments.

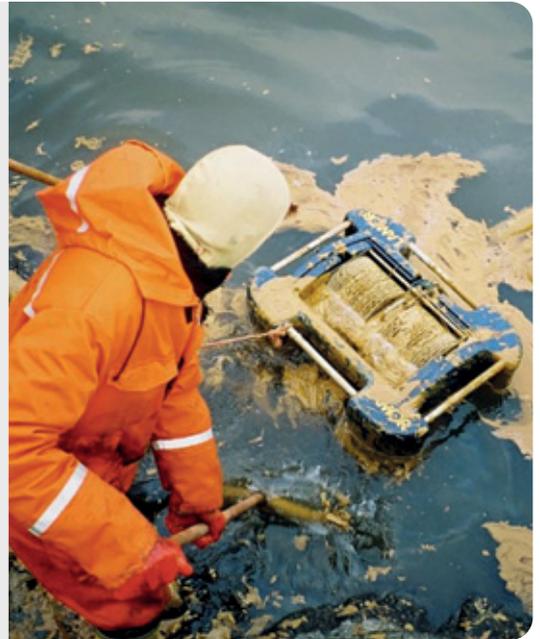

## On-land

Lamor's on-land packages are essential for any oil-spill-response prone location. By having any sort of an equipment package for on-land oil spill response, you can ensure that any incidents are contained and easier to clean up, preventing further environmental damage and protecting public health.

### Typical equipment package will include:

- Vacuum systems
- Damming equipment
- Sand bags
- Pumps
- Skimmers
- Temporary storage

## Off-shore

By having an off-shore package on hand, companies can respond quickly and effectively to oil spills, minimizing environmental damage and protecting marine life. Off-shore spills vary greatly depending on size, location and oil concentration, thus Lamor's packages are heavily customizable to fit your specific needs.

### Typical equipment package will include:

- Off-shore boom w/e hydraulic boom reel
- Powerpack
- Air inflator
- Skimmers
- Ancillary products
- Temporary storage barges
- Available in DNV containers

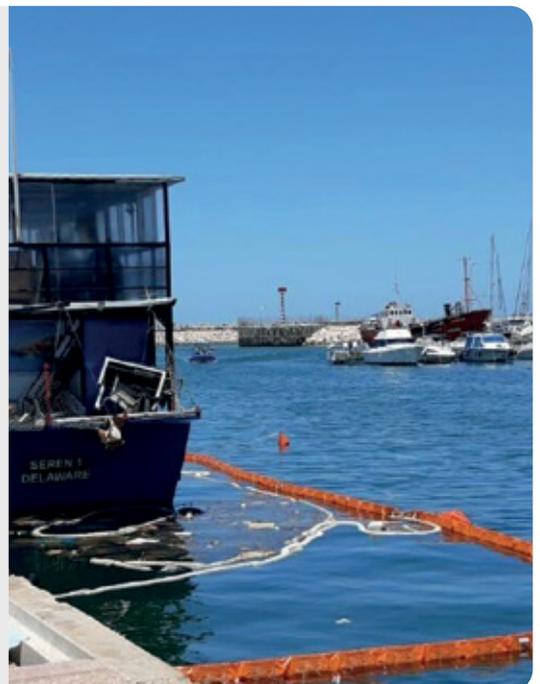

## Ports, Harbors & Shoreline

There are multiple options for skimming devices in our port, harbor & Shoreline packages, from a weir option to oleophilic brush or disk skimmers. All the skimmers are lightweight, durable and can be maneuvered without the need for mechanical assistance and is ideal for the difficult environments present at ports, Harbors & Shorelines.

### Typical equipment package will include:

- 150m of fence boom
- Skimmer and hydraulic Pump Unit
- Fastank 2000, including box/ground sheet/liner
- Absorbent pads, bale
- Personal Protective Equipment sets
- 10ft DNV container

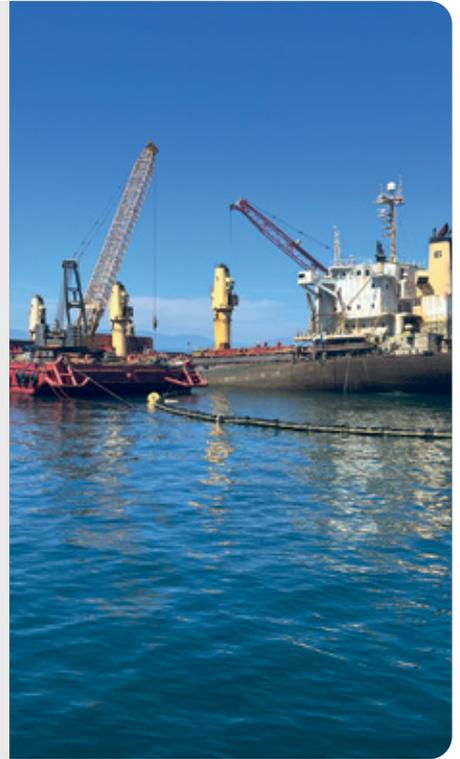

## Salvage support & wreck removal

Marine salvage activities and the removal of shipwrecks pose a dynamic operating environment with high potential for the loss of pollutants and debris. Lamor offers a support solution to provide counter pollution leadership skills and a suitable package of equipment to mitigate risk and expedite a response.

The Lamor team forms part of the Salvors' planning operation and mobilises in synchronisation with the salvage team. As the Lamor team will work with the support vessel crews staffing can be kept to two or three Senior Technicians for most projects.

### Typical equipment package will include:

- 200m Offshore boom c/w powerpack and ancillaries
- Weir skimmer c/w powerpack
- Oleophilic skimmer c/w powerpack, hoses and brush unit
- Side sweep assembly
- 2 x 20 tonne floating oil storage bags c/w air blower

## Dispersant applications

Use of chemical dispersants is a front-line response for many national and corporate bodies. Our most commonly used application system is the Ayles Fernie AFEDO Nozzle system. These easy to mount nozzles can be temporarily fixed to almost any vessel, (without modification) regardless of size, and are very straightforward to operate. They produce an even teardrop spray pattern that can be angled directly onto the area required.

### Typical equipment packages will include:

- Dispersant pumping system with nozzles
- 4x 1000ltr IBCs of dispersant
- Ancillaries and PPE sets

## Ancillary

To round it up Lamor also offers ancillary products for each of their packages, modified to best suit your needs. Additional oil storage barges, skimmers, pumps, powerpacks or spare parts can always be requested, as Lamor has a vast inventory of spare parts and ancillary products in their global warehouses.

### Typical Ancillary products for equipment packages will include:

- Oil storage barges
- Pumps
- Powerpacks
- Skimmers
- hoses

# Added value

## Training

Lamor provides an extensive mix of training courses and modules to suit the needs of its diverse client base and the very broad demands of industry and government practitioners.

The IMO OPRC convention places a duty on all the signatory countries to have in place a contingency and preparedness for spills and pollution. This is now law in many countries with ports having a statutory responsibility to comply. Inherent in this OPRC preparedness requirement is the need to have suitably trained personnel, from senior management through to those persons involved in the physical clean up operations.

Lamor backs up its training programmes by offering training exercises and review/progress meetings. Accreditation is mainly granted by the Nautical Institute on behalf of the IMO, UK MCA and IPIECA. The names of all Lamor trainers are registered with the Nautical Institute.

## Maintenance

Lamor is able to lean on its 40+ years of equipment manufacture to provide clients with a bespoke equipment management system and planned maintenance system for all equipment types and brands.

To give the best maintenance, Lamor Technicians can be scheduled to attend the Client stockpile at regular intervals to undertake the maintenance and update records.

Lamor also holds a vast inventory of spare parts for when up-time of equipment is crucial, reducing lead-times.

## Expertise

We are committed to building an extensive team of the world's best technical spill response specialists and environmental consultants, so that we can offer a wide range of support services for our client's businesses. From support focused on oil spill management and training or equipment readiness, to contingency planning, Lamor can cover the entire spectrum of oil spill preparedness projects and programmes.

Our pool of experienced technical experts are available to embed into your organisation, often on rotation which allows strong relationships to develop both within your organisation and with other stakeholder groups involved in oil spill preparedness and response.

## Global network

With globally distributed equipment inventories and networks that enable professional emergency response in any location, Lamor offers a full range of oil spill response technology & services for sale and rental. Lamor's "Globally local" approach ensures seamless cooperation between partners, and aids massively in lead-times for shipping out products, manpower and expertise when an incident has occurred.
