**LAMOR**

# Tank Cleaning Solutions

Our tank cleaning services are essential for maintaining storage tanks, process vessels, and marine tanks. We support various industries, including oil and gas, chemical manufacturing, and marine operations, ensuring that tanks are kept in optimal condition for safe and efficient operations.

We offer both man entry and non-man entry tank cleaning services, ensuring safety and efficiency in every project. Our non-man entry solutions include semi-automatic and automatic jetting, robotic cleaning, and chemical cleaning, each tailored to specific tank geometries and contamination levels.

## Man Entry Tank Cleaning

For tanks requiring human intervention, our skilled teams utilize high-pressure and ultra-high-pressure water jetting, hot washing, and rag wiping techniques to achieve the highest standards of cleanliness. This approach is ideal for tanks with complex internal structures, significant solid accumulation, or high cleanliness requirements.

## Non-Man Entry Tank Cleaning

Our non-man entry solutions reduce risk and manpower requirements while delivering exceptional results. These include:

- **Semi-Automatic and Automatic Jetting:** Efficient for tanks with uncomplicated geometries and mobile contaminants.
- **Robotic Cleaning:** Suitable for large tanks with significant sludge and solids buildup, offering unique capabilities such as explosion-proof remote control units.
- **Chemical Cleaning:** Effective for difficult-to-remove contaminants and complex vessel geometries, providing high levels of cleanliness and corrosion product removal.

## Commercial Considerations

We understand the importance of cost-efficiency and tailored solutions. Our services are designed to offer competitive pricing while maintaining high standards of quality and safety. Whether it's a one-off project or a long-term maintenance contract, we work closely with our clients to deliver the best possible outcomes.

## Key benefits

- **Safety:** Minimizing risk through advanced non-man entry technologies.
- **Efficiency:** Reducing downtime and labor costs with automated solutions.
- **Quality:** Achieving high cleanliness standards for critical applications.
- **Flexibility:** Adapting to different tank sizes, shapes, and contamination levels.

## Contact Us

For more information on our material recycling and industrial services, or to discuss your specific tank cleaning needs, please contact us. Our team of experts is ready to provide tailored solutions that meet your requirements.

Let's clean the world

## Lamor in brief

---

Lamor is one of the world's leading providers of environmental solutions. For four decades, we have worked to clean up and prevent environmental incidents on land and at sea.

Environmental protection, soil remediation and material recycling: Our innovative technologies, services and tailored solutions, ranging from oil spill response, waste management and water treatment to soil remediation and plastic recycling, benefit customers and environments all over the world.

We are capable of vast and fast operations thanks to our connected ecosystem of local partners, steered by our experts. Lamor's share is listed on the Nasdaq Helsinki (ticker: LAMOR). Further information: [www.lamor.com](http://www.lamor.com)
